The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2, 7-8, 10-11, 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park – US 6,509,241 and applicant's admitted prior art.

See reasons of record in paper No. 20050708, mailed July 11, 2005.

Applicant's arguments filed on October 3, 2005 have been fully considered but they are not persuasive.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992).

Park most certainly forms a halo structure by implanting around the gate structure, in the source/drain region, and forming a trench which removes a portion of the halo structure, and forming a semiconductor material layer in the trench using epitaxial deposition. The HDD dopant into a top

portion may reasonably be attained with the parameters as disclosed by Park at col. 5, line 59 to col. 6, line 5. The arguments relating to single or two halo steps, and extension regions by Park are irrelevant to the claimed invention, as are the comments related to low/high energy implants. The applicant's admitted prior art teaches using an angled implant to form halo regions, which permits implantation of dopant under the gate structures.

Claims 3-6, 9, 12-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
